设旋转曲面

$$X(u,\theta) = (f(u)\cos(\theta), f(u)\sin(\theta), g(u)).$$

一方面有

$$\mathrm{d}x = f'(u)\cos{(\theta)}\mathrm{d}u - f(u)\sin{(\theta)}\mathrm{d}\theta,$$

 $\mathrm{d}y = f'(u)\sin{(\theta)}\mathrm{d}u + f(u)\cos{(\theta)}\mathrm{d}\theta,$
 $\mathrm{d}z = g'(u)\mathrm{d}u.$

从而

$$\mathrm{d} s^2 = \mathrm{d} x^2 + \mathrm{d} y^2 + \mathrm{d} z^2 = (f'(u)^2 + g'(u)^2) \mathrm{d} u^2 + f(u)^2 \mathrm{d} \theta^2.$$

但另一方面,

$$X_u = (f'(u)\cos\theta, f'(u)\sin\theta, g'(u)),$$

$$X_{\theta} = (-f(u)\sin\theta, f(u)\cos\theta, g(u)).$$

从而

$$egin{aligned} \mathrm{d}s^2 &= E\mathrm{d}u^2 + 2F\mathrm{d}u\mathrm{d} heta + G\mathrm{d} heta^2 \ &= (f'(u)^2 + g'(u)^2)\mathrm{d}u^2 + g(u)g'(u)\mathrm{d}u\mathrm{d} heta + (f(u)^2 + g(u)^2)\mathrm{d} heta^2 \end{aligned}$$

矛盾.
